Dataset Preparation

Dataset preparation script for YOLO Object Detection Project.

This script downloads, filters, augments, and organizes datasets for training an object detection model.

`build_dataset.augment_images (input_dir, n_target)`

Augments images from a given directory to reach a specified target count.

Parameters

- **input_dir** (*str*) – Directory containing original images.
- **n_target** (*int*) – Desired total number of images after augmentation.

Returns None

`build_dataset.get_filtered_dataset (class_name, target_count, max_people=1)`

Filters a FiftyOne Zoo dataset to retain only samples containing the target class.

Parameters

- **class_name** (*str*) – The class name to filter (e.g., “Dog”, “Cat”).
- **target_count** (*int*) – The number of filtered samples desired.
- **max_people** (*int, optional*) – Maximum allowed people per image when filtering “Person”. Defaults to 1.

Returns A FiftyOne dataset containing exactly *target_count* samples, each of which has at least one Detection with label *class_name*.

Return type `fiftyone.core.dataset.Dataset`

Model Training

Model Training Script for YOLO Object Detection Project.

This script trains a YOLOv8 model on the prepared dataset and evaluates its performance on the validation set.

Video Annotation GUI

```
GUI.open_file ( )
```

```
GUI.process_video ( video_path )
```

Results and Discussion

Here you can summarize:

- Training/validation curves
- mAP / class-by-class accuracy
- Sample annotated frames

Conclusion

Wrap up:

- What worked
- What we learned
- Potential next steps

Introduction

This project develops a YOLO-based object detection system, including:

- **Dataset Preparation** (*build_dataset.py*)
- **Model Training** (*yolov8_train.py*)
- **Video Annotation GUI** (*GUI.py*)

System Overview

The pipeline consists of:

1. Downloading, filtering & augmenting images
2. Training a YOLOv8 detector
3. Running a Tkinter GUI to annotate new videos

b

`build_dataset`, [1](#)

g

`GUI`, [5](#)

y

`yolov8_train`, [3](#)

A

`augment_images()` (in module `build_dataset`), 1

B

`build_dataset`
module, 1

G

`get_filtered_dataset()` (in module `build_dataset`), 1

`GUI`
module, 5

M

module
 `build_dataset`, 1
 `GUI`, 5
 `yolov8_train`, 3

O

`open_file()` (in module `GUI`), 5

P

`process_video()` (in module `GUI`), 5

Y

`yolov8_train`
module, 3
